Fundusz Spójności

Smart City strategy combines residents needs with new technologies. **Smart City is not the purchase of expensive gadgets from external contractors, but a fundamental change in the way we operate, based on strengthening our own potential through integration of systems.**

The estimate of areas where Konin needs smart solutions was carried out through a review of current projects in the city and the needs reported by stakeholders and residents. **The essence of the smart approach is the belief that data, tables and numbers have value only when we are able to take them into consideration.**

The Smart City Plan shows the development path for Konin in the spirit of the **Human Smart City concept** – a city where technologies improve interpersonal relations, support creativity and entrepreneurship. The concept of smart Konin suggest the cooperation of the local government and its inhabitants for a modern and constantly growing city with respect for the natural environment.

The plan has a time horizon until 2030, which is why it is very important to do regular updates. Indicators presented in the document simplify the process of monitoring implementation of personalized tasks. The Smart City Plan - Konin is not another unnecessary document, but a specified path on the way to create a **green city of energy**.
