Your suggestions
Describe in a few words what functionality - in your opinion - could be found in a city mobile application or a responsive website? 88 answers

Where and what is available. Who to contact if you have trouble getting to. mapping the route of access taking into account the facilities for people with specific disabilities

the application should be adapted to the visually impaired

Telephone numbers like: where you can get other information / support

MZK and PKS timetables, indication of persons to contact with OzN and / or interpreter JM,

indication of the space and attractions available in the City for OzN

The application should be easy and clear to use.
Lighting, good visibility and legibility

Safety Information

I have no comments

Is the place properly marked for visually impaired people? The application / www is for the visually impaired.
Are there sign language interpreters in places where people are served? Possibility to contact an interpreter.

Assistant service orders.

Is there an induction loop, typhlographic board or also?
sign language interpreter service.

Voice information about the line number of the approaching bus to the stop

Whether a given building, place is available - yes or no, with a very short information.

Map with the most important public buildings - information on facilities for people with disabilities.
A proposal for walks around the city, taking into account disabled people in wheelchairs - the possibility of traveling for such a person in a wheelchair.

Cinemas, cafes, restaurants

necessary telephones

information about sign language in offices

Information about ATMs

information about playgrounds places where you can spend with your family, children
How to get there
-

The application should contain information about the places where people trained in servicing disabled people work, e.g. which taxis will professionally help a blind person or a person with a physical disability.
simple and reliable

Interactive legend
Opening hours

the municipal mobile application could contain available parking spaces

Determining the traffic volume and the number of people in MZK vehicles. This is important for people in wheelchairs.

easy connection search, alternative connections

In my opinion, the application should contain information on city lighting, especially whether it makes a squeaking sound for the blind or there is a twirl at the bottom of the pressure to make the light green (There is something in the UK, because during a chaotic day you can not hear a squeak)

Information on elevator failures, e.g. in the railway station tunnel, availability of schools for ON, adapted places of culture (cinemas, amphitheater, community centers), availability of polling stations for ON, marking of places where defibrillators are located

Charging the phone / computer.
It is difficult to determine at the moment, but information is very needed whether the bus stop is illuminated and whether the timetable is visible at night, in the absence of lighting. It is also important that the website contains information about the available ticket machines.

In my opinion, there should be zones, Special Paths for people in wheelchairs, so that they can move safely there.

It should be divided into categories, i.e. disabled, including information about it

Addresses of public buildings and a map with city attractions

Time to cover the route is adequate to the conditions. declines, elevations of the terrain. division into user with special needs and people who do not have them

Local traffic jams

How far is the stop / building

-all shops, restaurants and other places -where there are free parking spaces - where there are traffic jams

List of departments and matters to be dealt with

Better describing for people with disabilities in various institutions if there are elevator ramps.

Information about threats, repairs, difficulties

Presentation of difficulties occurring in the city, i.e. traffic jams, accidents. safe crossings for pedestrian and vehicle tracks

Everything that was covered in these questions should be included

tickets and price

every place with every amenity is listed there

priority in serving the disabled

All questions were presented
Facilities for disabled people (in a wheelchair, deaf or blind), e.g. the availability of public transport and its adaptation for such people, sign interpreters, Braille plates Amenities for foreigners, e.g. well-qualified staff, interpreters, signs with annotations in English

Information on bicycle routes and information with the addresses of places to rent a bicycle.

Are the means of public transport adapted to the needs of disabled people?

PLANNED SCHEDULE FROM PLACE TO PLACE.

Quick, clear and cost-effective

easy devices to apply

e.g. where you can buy a MZK ticket, where are the points and the method of payment
Required information to move freely around the city.

There should be facilities for deaf and blind people and for people in wheelchairs

location of obstacles in traffic routes, such as sidewalks, for example lanterns installed in the middle of a sidewalk, stairs of a building taking up most of the sidewalk, information about the sidewalk's collision with a bicycle lane, stairs without barriers, high curbs
,
Are there spaces for parking bikes with a suitable rack? Selection of the nearest pharmacies
